

Open Android Studio:

- Launch Android Studio on your PC.

Import the Project:

- Go to **File > Open**.
- Navigate to the folder where you extracted the repository.
- Select the project folder (ensure it contains the `build.gradle` file) and click **OK**.

Sync Gradle Files:

- Android Studio will prompt you to sync Gradle files. Click **"Sync Now"**.
- If there are missing SDKs or dependencies, Android Studio will highlight them. Install any necessary components via the SDK Manager.

Build the Project:

- After syncing, build the project by clicking **Build > Make Project**.

Run the Application:

- Connect an Android device or start an emulator.
- Click **Run** (green play button) or select **Run > Run 'app'**.
